SpacesEDU

Supporting Competency-Based Education (CBE) With SpacesEDU

Place Students at the Center of Competency Development

Provide students with the opportunity to showcase and highlight their competency development over time with different learning Spaces. Individual Spaces provide a private setting for reflective critical thinking, drawing on readily accessible and ongoing educator feedback. Group Spaces promote the development of collaboration and communication skills while making cooperative work visible to all stakeholders.

Track Progress Towards Mastery From the Classroom to the District

Make standards-based assessment easy with real-time sorting of artifacts by standard and/or custom competency. Monitor student progress towards mastery of standards with district-wide customized Proficiency Scales and a powerful Proficiency Report with individual student and classroom-level data to empower teachers to embed data-driven instruction into their practice. Leverage a Reporting Space to create a visual, standards-based summary report for students with a collection of multimedia evidence to substantiate teacher assessments. At the district level, stay informed of student and district-wide progress towards mastery with Aministrator Reports.

Easily Integrate CBE Into Classroom Activities

Enable your teachers to easily provide personalized learning pathways to all students by assigning Activities tailored to individual or group needs and aligned to your standards. Empower students to document their progress towards mastery using multimedia, and enable teachers to provide feedback with the very same options – ensuring all students can demonstrate mastery and receive feedback in their preferred medium.

Engage Families in CBE

Increase family understanding of CBE with a dedicated Family Account. Provide families with access to real-time updates on their child's progress towards mastery and allow for timely interventions, streamlined communications, and a deeper understanding of student progress in learning. Enhance communication between your classroom teachers and families with direct and group Messaging capabilities, and encourage active family participation through Reactions and Comments.
